

Activity Execution Report

Day 3 Individual SQL Assessment — pen-and-paper, closed-book

DATE 17 Aug 2026	COHORT Hyderabad 2026 (20 learners)	FORMAT Individual, pen & paper	STATUS Successfully Executed
---------------------	--	-----------------------------------	---------------------------------

Objective

End of Day 3 marks the close of the SQL & Python track's most technically dense stretch — joins, window functions, PIVOT/UNPIVOT, and query optimization. Rather than another group lab, this activity was designed to check what each learner can do independently: no laptop, no internet, no teammate to lean on — just their own understanding of the material, applied on paper.

Activity Format

Element	Details
Delivery	Personalized booklet per learner — each learner's own name woven directly into every question, not just a header
Reference material	Full ER diagram + syntax cheat sheet (JOIN, window functions, PIVOT, date functions, optimization checklist) printed immediately before each learner's questions — genuinely closed-book, nothing to look up
Q1	The Logistics Partner Scorecard — joins + DATEDIFF/AVG + ascending RANK()
Q2	Profit by Segment, Year over Year — PIVOT technique applied to a fresh business question
Q3	Spot the Slow Query — identify and rewrite a deliberately inefficient query using Day 3's optimization best practices
Q4 (bonus)	"Draw It Out" — an ungraded, non-technical creative prompt asking each learner to draw themselves as the detective who solved the day's 3 cases

Execution Summary

The activity was run in person with the full cohort of 20 learners. All participants received their personalized booklet and completed the assessment under pen-and-paper, no-device conditions. Photo evidence (below) confirms full participation, engagement with the material well beyond a token attempt, and a positive reception of the Q4 creative bonus round.

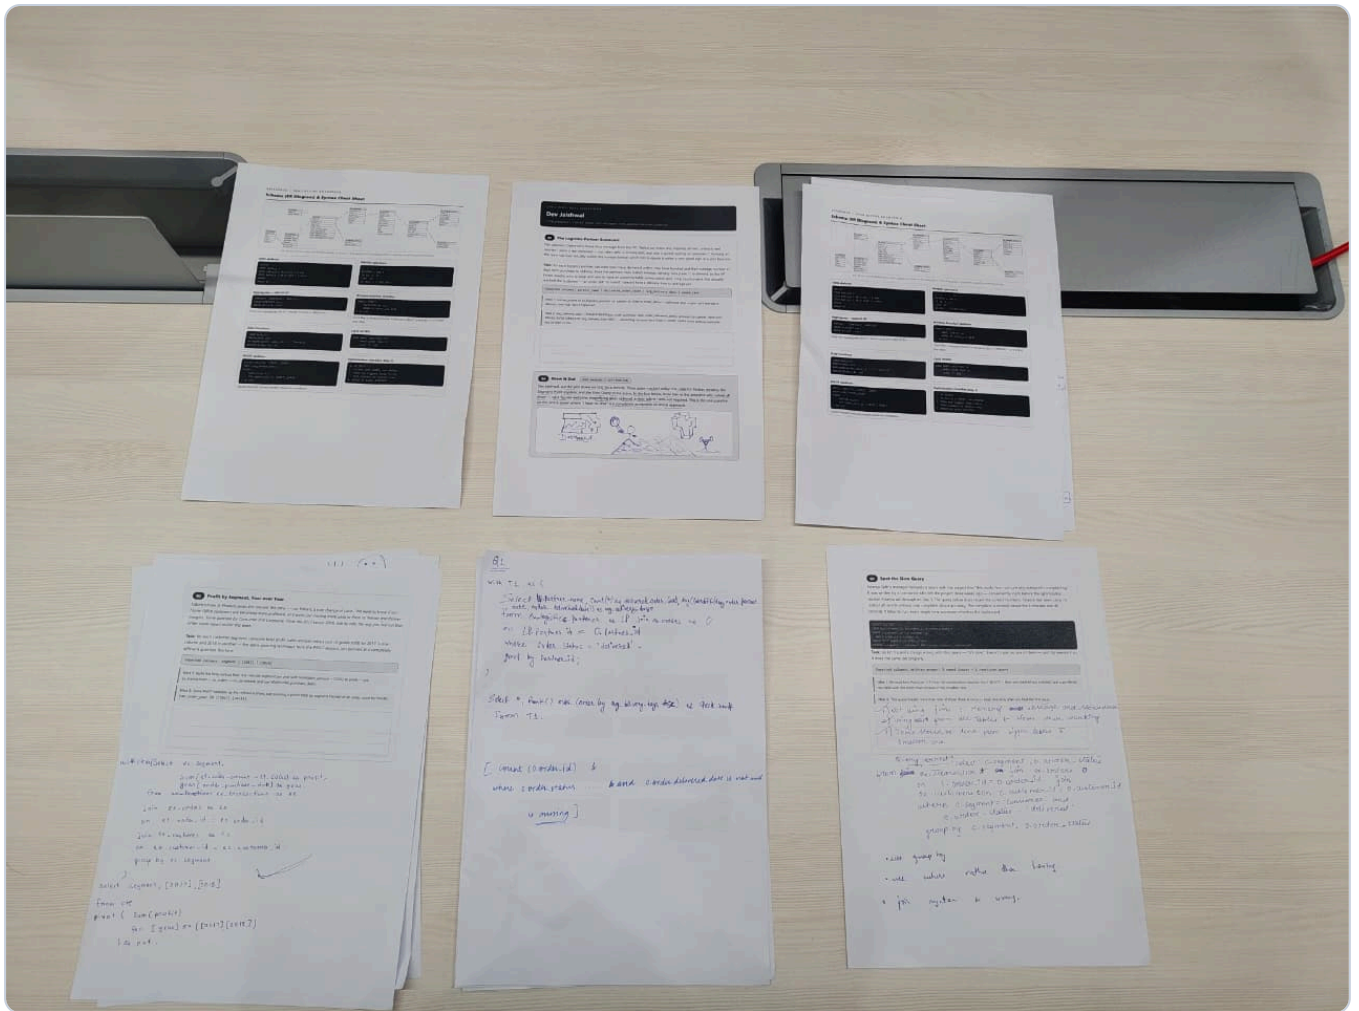

Note on scoring: this report covers execution only. Grading against the instructor answer key (SQL_Python/Day3/Day3_6_ASSESSMENT_Individual_SQL_Challenge/Day3_Individual_SQL_Assessment - Instructor Answer Key.pdf) is a separate follow-up step — no score data is included here since grading happens after collection.

Evidence

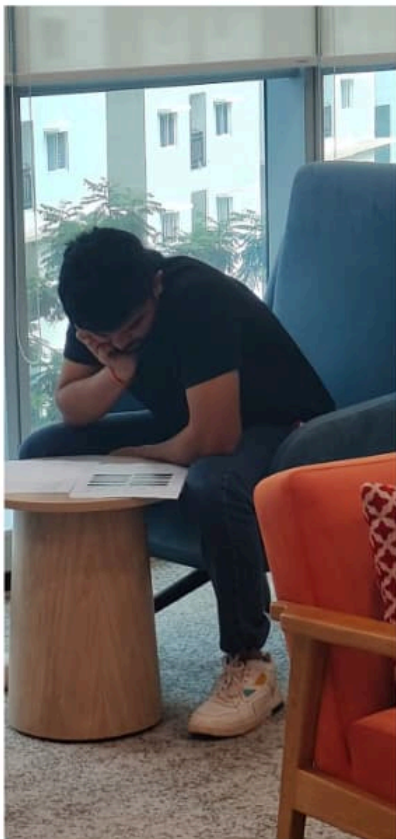

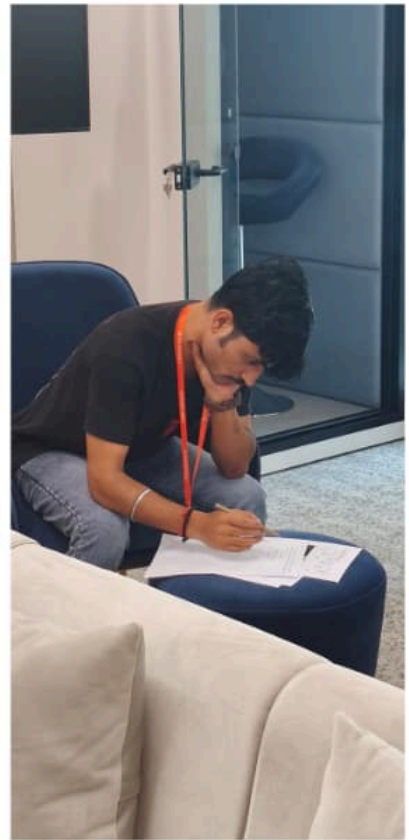

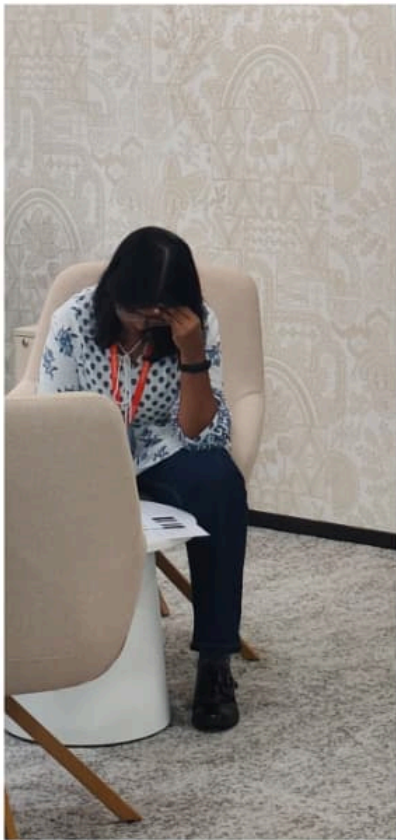

Photos below; a supplementary video recap (8.1 MB, Vidoe.mp4) is also available in the same evidence folder and is not embedded in this PDF.

Full cohort (20/20) at completion — every learner holding up their finished booklet.

Close-up of submitted work: handwritten CTEs and a PIVOT block for Q2, a full rewrite attempt for Q3, and a hand-drawn sketch in the Q4 "Draw It Out" box — evidence the reference material was actually used, not just glanced at.

Learners spread out across the office, each working independently in their own quiet corner — consistent with the closed-book, individual-effort intent of the activity.
